

Bode of Open-Loop Plant e1 to theta2 Transfer Function

Closed-Loop bandwidth = twice the loop transfer function crossover frequency(10π)

Tunable Block
Name: C
Sample Time: 0.02
Value:
0.66861

Bode Diagram

$$\text{Phase} \Rightarrow 60^\circ - 31.7^\circ = 28.3^\circ \quad (\text{Need More})$$

$$\text{Lead Compensator} \Rightarrow Z = -18.765 \quad P = -52.596$$

Dynamics			
Type	Location	Damping	Frequency
Lead	-18.8, -52.6	1	18.8, 52.6
